You'll be able to distribute it freely to either your subscribers or your prospects. You can use it to add value to your subscribers and keep them happy or use it as an ethical bribe to get people to opt in to your list. It's completely up to you!

Software Help Tutorials

Xtreme Affiliate Page Generator – Instructions

This software is meant to create a promotional tools page for your affiliate program like this one:

http://www.instantdirectoryprofits.com/?action=afftools

Step 1: Create A New Page

1) Enter the title of your affiliate page

2) Enter your affiliate url, using 'xxxx' where the affiliate ID part is located. This is the part where it's unique to your affiliates and where it can be changed according to what your affiliates enter.

Here are two examples:

http://xxxx.auctips.hop.clickbank.net

http://www.paydotcom.com/r/44650/xxxx/

As you can see, the 'xxxx' represents the affiliate ID for Clickbank and Paydotcom resepctively.

3) Enter your paypal email. This is optional and you enter it so you can earn commissions whenever someone clicks on the 'Created by Affiliate Tool' link on the promo page you generate.

Step 2: Select a template to customize

Currently, there's only one template. But in future, there might be new templates added or we might allow you to insert your own templates.

Next you'll proceed to creating your various affiliate promotional tools. Note you do not have to necessarily fill in all of them.

Step 3: Create Your Text Link Promo

Write down the anchor text of your text link promo and click on create ad.

You can create as many text link ads as you like. You can also delete existing text link ads.

One example of a text link promo for Instant Directory Profits is

Submit Your Site To 1500 Directories Easily!

Step 4: Create Your PPC Ad Promo

Fill in the title, body as well as the affiliate link for your PPC Ad promo.

Use the affiliate link format with the 'xxxx' embedded.

For instance, http://xxxx.auctips.hop.clickbank.net

Step 5: Create Your Banner Ad Promo

You can either enter your image url or browse from your PC. Though its recommended that you enter the image url directly.

Step 6: Create Your Signature Ad Promo

This is basically a forum signature ad.

Here's an example:

Want Over 1500 One Way Backlinks?

Use This Secret Submission Tool Now!

http://www.instantdirectoryprofits.com/?e=xxxx

Step 7: Create Your Email Ad Promo

This is a solo ad email promo for your affiliates to mail out to their lists.

Step 8: Create Your Autoresponder Ad Promo

This is like a email promo for your affiliates to add into their autoresponder.

Step 9: Create Your Article

Type in your article for your affiliates to use. You can create as many articles as you like.

Step 10: Create Your Popup Ad Promo

Enter your popup ad code details.

Step 11: Generate Code

You have two options:

1) Save as webpage – Type in your desired filename and click on 'generate code'. Thereafter, you'll find the file being generated at the location where you've saved it.

Simply upload it onto your server or you can edit it in your HTML editor if you like.

2) Place code in clipboard to paste in your HTML editor

Or if you prefer to just copy the code and paste it in your HTML editor for editing, select the second option.

Xtreme Article Rewriter – Instructions

Step 1: Seed Articles

Input Folder: Browse through your hard disk and select the folder where you want the software to extract information from. This folder should contain articles in TXT format which can be opened with notepad. Once you select the folder, article tool will detect all the TXT files and will list them below.

Output Folder: This is where you want the output files to be extracted after you complete the whole manipulation process.

Select Articles: You can select individually the articles (found in input folder) in the list which has been presented to you or you can select all by clicking on the Select All button.

Note: provide as many files as possible so that the software will have a very large database of content from which it can pick information and your content will be more unique.

There are **3 options presented on the right**, you may select one or all 3 choices. It depends what you want to do. For the purpose of this tutorial I'll choose all 3 so that you can see all the features that are presented in using this software.

Swap articles: this allows you to interchange content from one article to another. So it will just pick up a few sentences or paragraph to build up a new one.

Replace Synonyms: The software has a built in database of thousands of synonyms. If selecting this feature, you will allow the software to automatically substitute words with synonyms. You will also be able to set a % of change to the content.

Insert Custom Text: This part allows you to enter multiple text and paragraphs that will be randomly entered at the top, middle and bottom of the articles.

OK now remember, I select all 3 options. Consequently all the features of the software will be enable.

Step 2: Swap Articles

Prefix Keyword: This is the filename of individual files to be used once the articles are being created.

Paragraphs per file: This refers to the number of paragraph you want each article to contain when created automatically.

Articles to create: Refers to the number of articles to be created in total.

Step 3: Synonym Manager

You can select a group of synonyms that you may want to use to manipulate the content. You can add your own synonyms or even some group synonyms. You can select a few of them or select all of them.

This part can be completely customized by you. Infact, this part is very important and will determine how good your output article will be. Providing an accurate "library" of words based on the article topics will greatly help in the quality of the output articles.

Step 4: Replacement Level

You can have multiple copies of the versions you want to create. Just enter a figure and they will be created.

You also choose the % of the text to be manipulated. We recommend 15% for most cases. But if you have a very accurate synonyms list that you have personally added, you can go up 75%. But again, you'll have to check it and see if everything is fine and the sentences are readable.

Step 5: Keywords To Ignore

These are keywords that you don't want the software to change within the content. Those words will remain intact. You can enter as many as you want.

Step 6: Insert Header, Middle and Footer

This part is for the 3rd option selected in step 1.

With this you can enter standard paragraphs which will be place at the top, middle and bottom of the articles. You can use ads and what ever content you wish to break the original article.

Step 7: Insert Text Blocks…

This is almost same as step 5 but instead it is more random. It adds multiple lines of text after one or 2 paragraph through out the whole article to make it unique.

Step 8: You are done!

Click the **PROCESS NOW** button and the articles will be created in the output folder you selected in step 1.

Xtreme Blog Hunter – Instructions

Keyword Search Function: You can search for blog posts that are related to your niche with the keyword in its content.

1. Enter the keyword that you would like to conduct the search under.

2. You can also enter in your domain name to check if your link is already on the blog.
This helps you to keep track of your link building efforts.

3. You can choose the depth of the searches under **'Search Deep'**.

Hint The deeper the searches, the more results you will get.

4. Click on 'Search' to begin searching the Internet for the blogs.

5. The results show the URL of the blog post, the page rank of the home page that post is found in (under **'Home Page PR'**) and its Alexa ranking. You can use the information to help you decide whether to leave comments on the site.

6. You can either select all the search results or click individual results that you want
to delete from the list. Click on **'Delete Selected'** or **'Delete All'** to remove unwanted search results.

7. Click **'Save Results'** to save the list of search results for reference and for use later on.

Xtreme Content Checker – Instructions

Content Comparison: Compare two articles side-by-side and check for their similarities, **calculate keyword densities and amount of duplicate content** using the tool.

1. You can import two different articles into the tool. One will be shown on the right-hand window pane of the program while the other in the left.

2. Import the articles that you want to compare and analyze by clicking on the **'Import'** button which is found on left hand corner of each window pane. Each import button corresponds with the window pane above it.

3. Then in the file browser box, find and select the article that you wish to import. Make sure that the file is in either of the following formats:

a. Microsoft Word (*.doc)

b. Text File (*.txt)

c. Rich Text Format (*.rtf)

4. You can also type your article contents directly into the window panes.

5. Or you can also use the standard **'Copy, Cut and Paste'** function where you highlight your
content from another application, click 'Copy' in that application and then press 'Ctrl-V' in
the Duplicate Content Checker tool to paste the content into the window panes of the program.

Make use of the following Windows shortcut keys to help you:

a. Ctrl-X :Cut

b. Ctrl-C: Copy

c. Ctrl-V: Paste.

6. If you want delete the content entered in the window pane, just click on **'Clear'** button which is found at the bottom.

7. Click on the **'Compare'** button which is found on the top left hand corner of the program to start run the comparative analysis of both texts. You'd realized that matching words that are found in both texts are highlighted as the analysis goes. Words that are found in both articles will be highlighted in different colours. This is for you to be aware of the similarities of the content at a glance.

8. However, should you need to clear the highlighting, just click on **'Clear Highlighting'** button found below the respective window panes.

9. You can keep track of the number of words, sentences and paragraphs found in your article in the boxes found below the window pane.

Content Analysis: Check for keyword density and duplicate content percentage which can help you to better optimize your content for SEO purposes.

10. You can check the keyword density of the content by entering in your keyword phrase below each window pane. And then click on **'Calculate Keyword Density'** button to find out the percentage of keyword phrases in the content found in the related window pane. It is recommended that the percentage is kept between 1.5% to 6.5%.

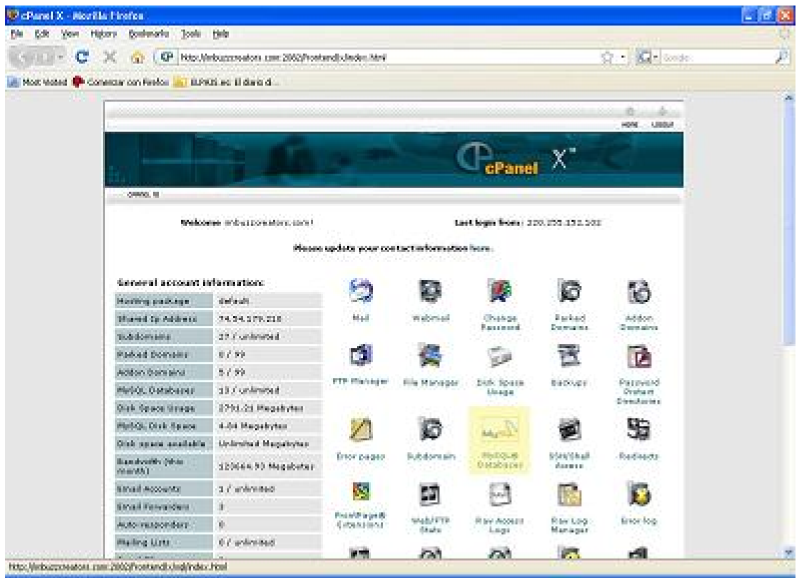
11. The keyword phrase count or 'No.' lets you know the number of times the keyword appears in the text and the phrases are highlighted for you to know where their positions are in the text.

12. The 'Minimum Length of The Matching Parts' box determines what the minimum size of text to be considered when the program analyses for duplicate content. The preset sizes are words, sentences and paragraphs. Just enter in the number of matching parts in the entry box and then select the size that you want.

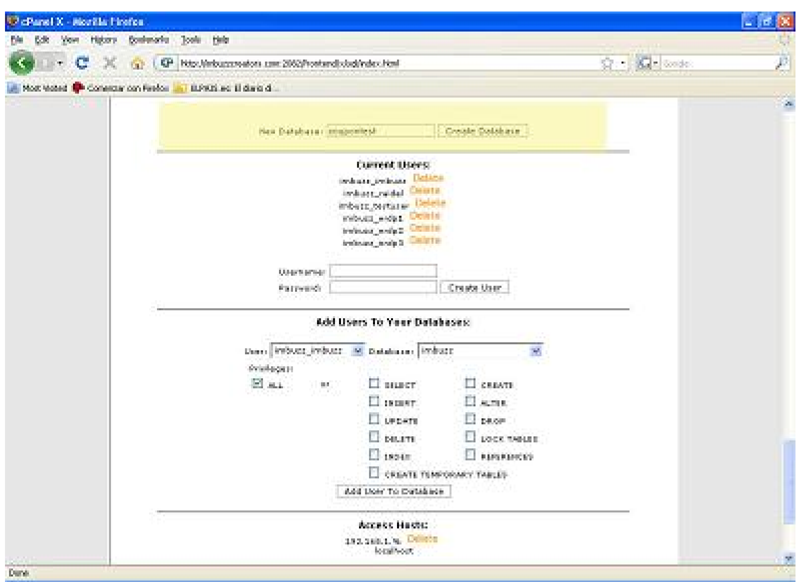
13. The **'Duplicate Content'** box at the bottom of the program is the analysis percentage done after summarizing the duplicate content or similarities between the two texts in terms of a percentage value. The duplicate content percentage is recommended to fall below 35%.

Xtreme Coupon Code Generator – Instructions

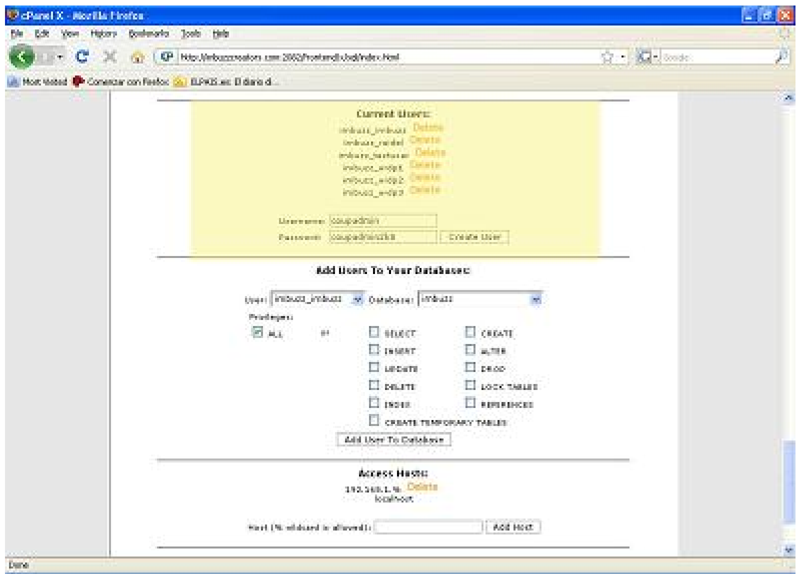
1) Go to your **cpanel** url and enter your login info. Then go to MySQL database:



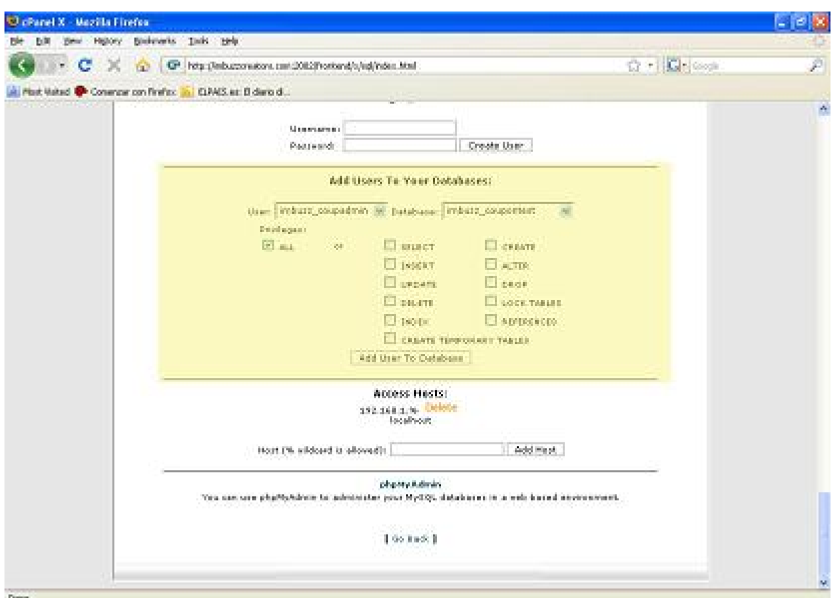
2) You can use a previous database or create a new database. In this sample I put "coupontest". Remember that at the end your database will be something like: "XXXXX_coupontest". Double check the name of the database once created. It differs for different hosting accounts.



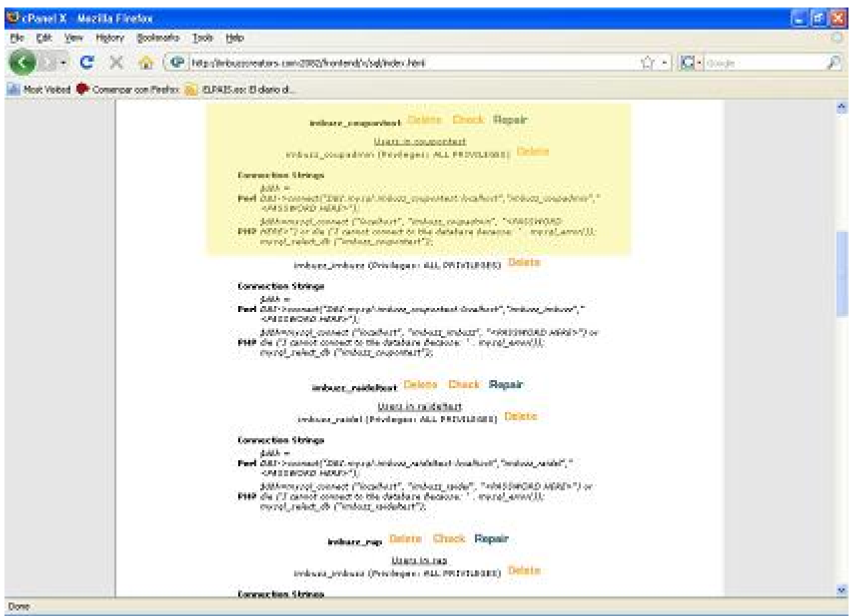
3) Create a new user. I use "coupadmin" with password "coupadmin2k8". Remember that at the end your user will be something like: "XXXXX_coupadmin". XXXX will be replaced by something else.



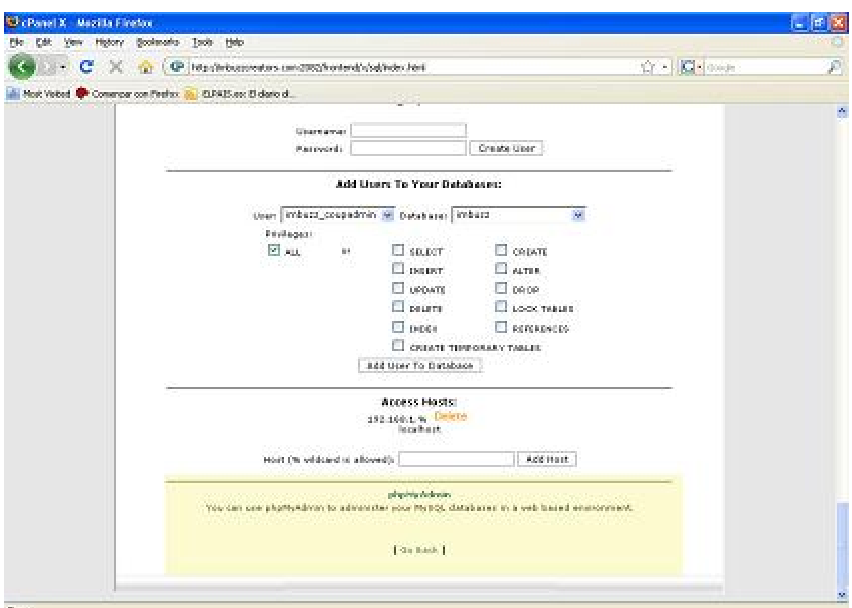
4) Assign permissions in your database to your user. This can be done adding the user to the database with all checked.



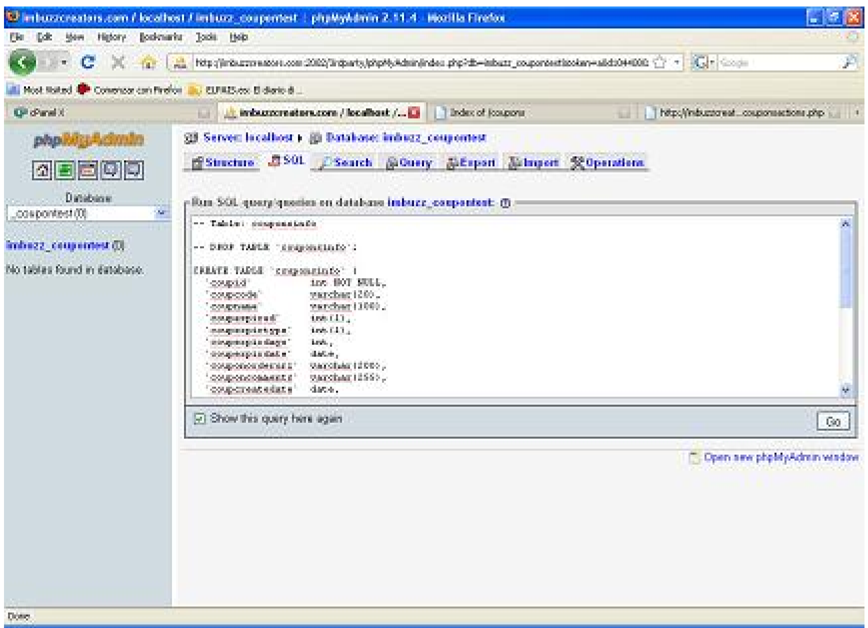
5) Check that everything is ok, the user with all privileges to your database.



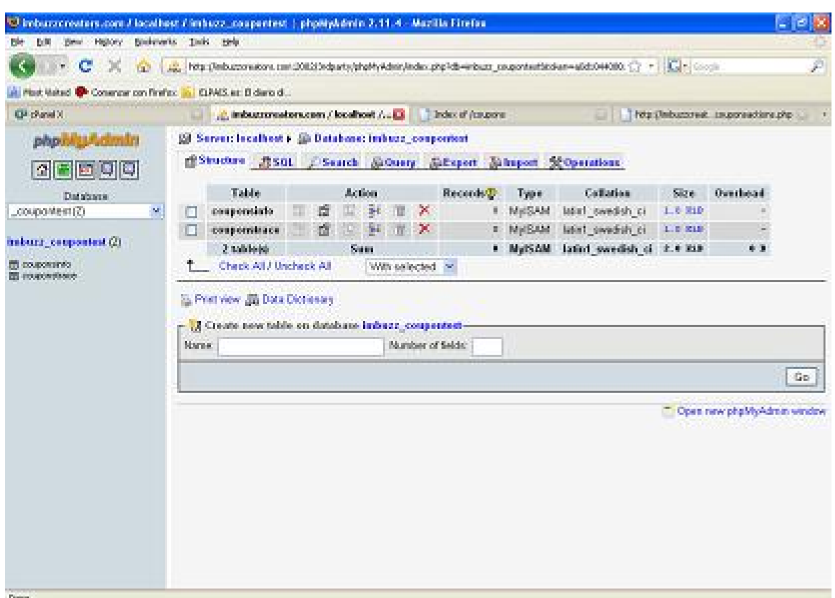
6) Go to PhpMyAdmin to create the tables.



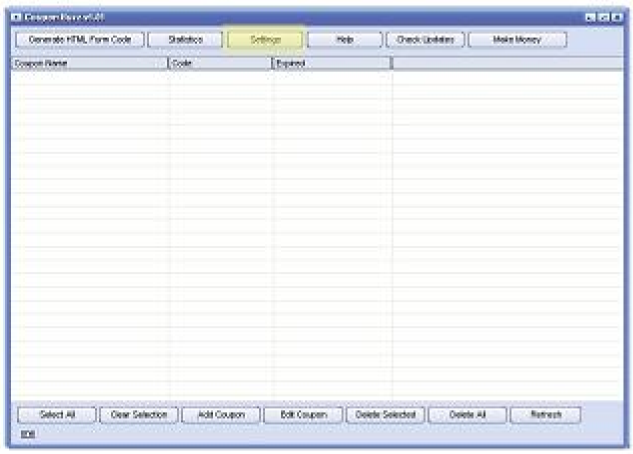
7) Select the “XXXXX_coupontest” database and go to the SQL tab. Then copy and paste the sql script to create database structure. Then press Go.



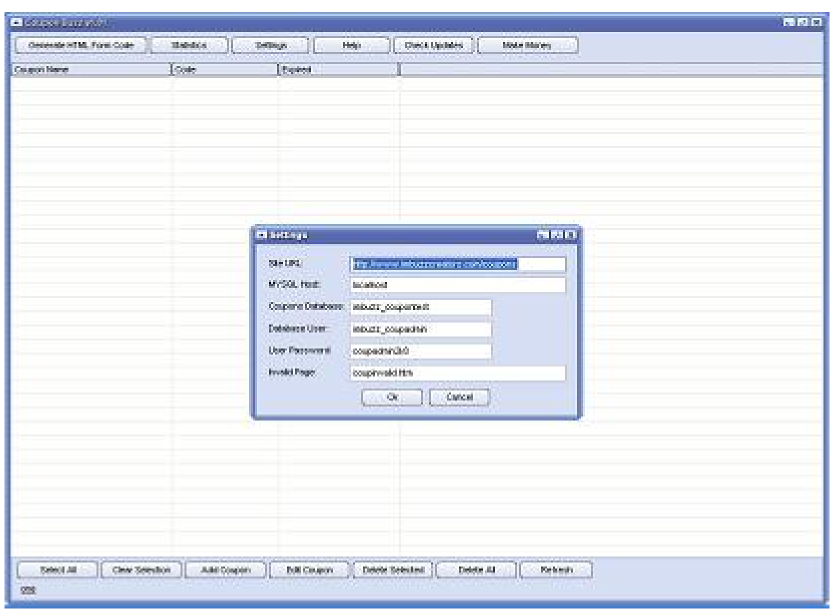
If everything is ok, you can check the tab Structure where you found the 2 tables created.



9) Now we are ready customize the application. First install main application and go to the settings button.

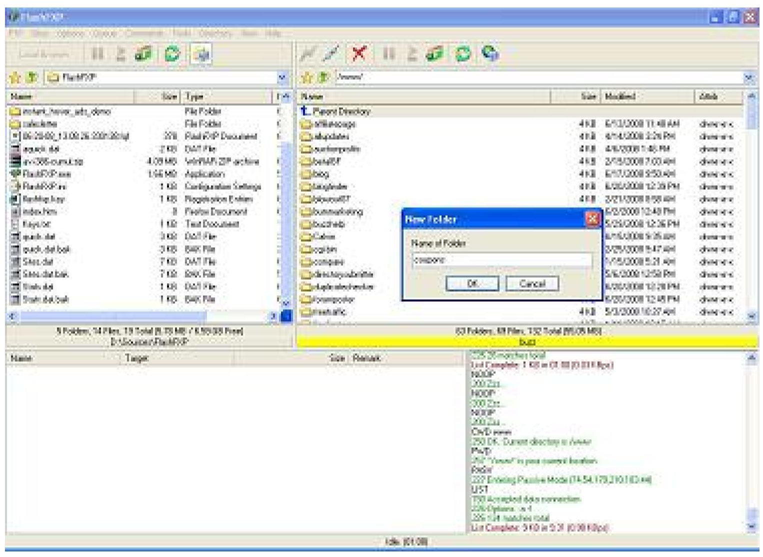


10) Enter the settings. Pay special attention to the names of the database and user that have the prefix "XXXXX_" since this is the exact name in the Mysql server. Also check the site url, i.e. *http://www.yourdomain.com/coupons*. It means that you have to create a "coupons" folder in the root of your site. This folder will contain the necessary php scripts to make application work. The name could be other but you have to specify here and save settings.

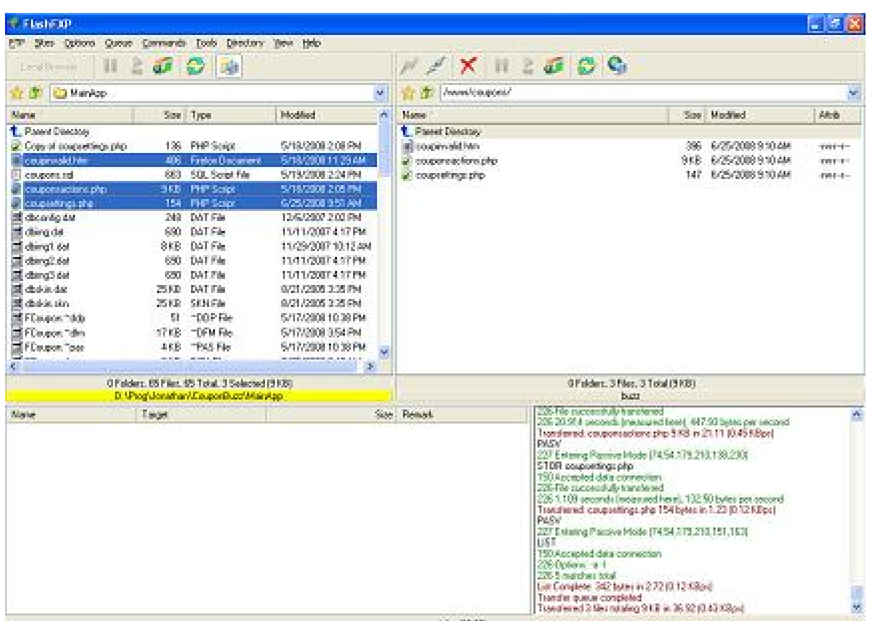


11) When you save settings, application customize the coupsettings.php file. Then we need to upload this file and the other 2: couponsactions.php and coupinvalid.htm to your webserver in the folder you specify, in your case *http://www.yourdomain.com/coupons*.

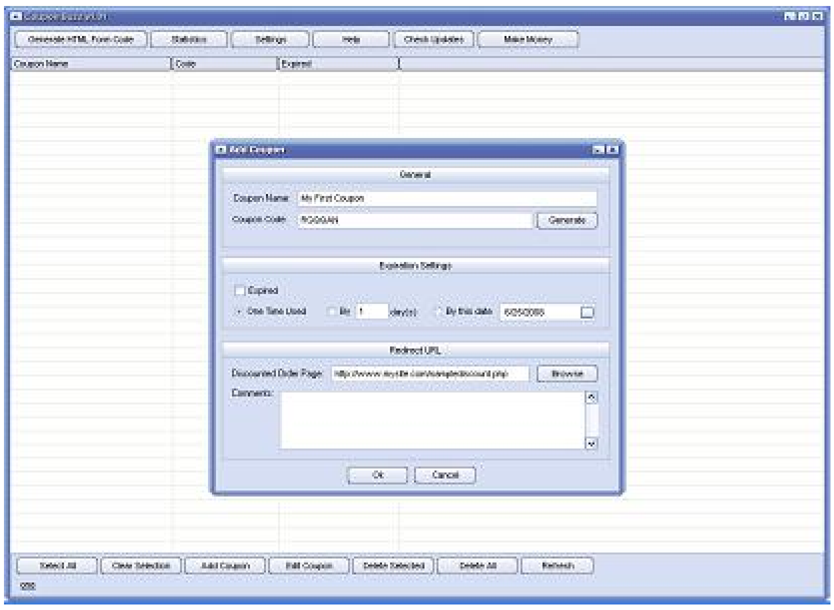
This is an screenshot of the ftp client software.



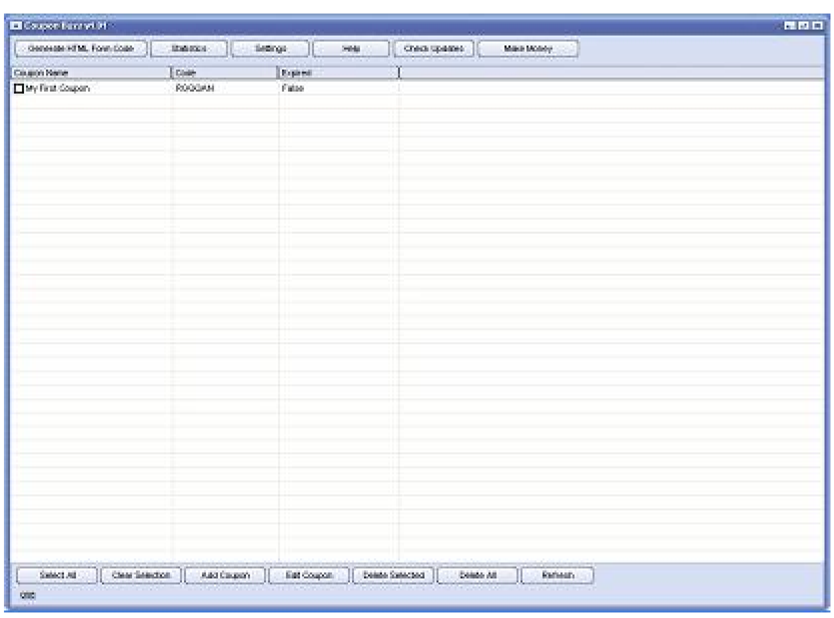
12) Now just upload the 3 files to this folder and we are done with the install!



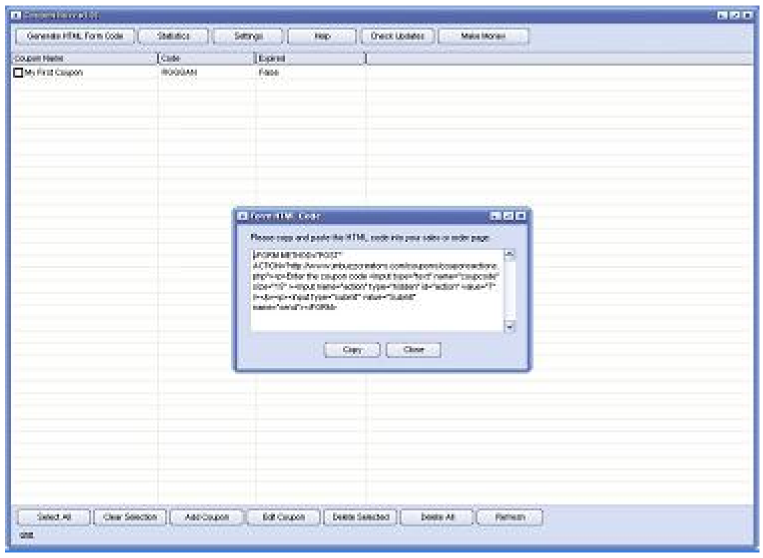
13) Now let's create a coupon for test. I generated a random code and let the settings as default, also put a sample discount order page.



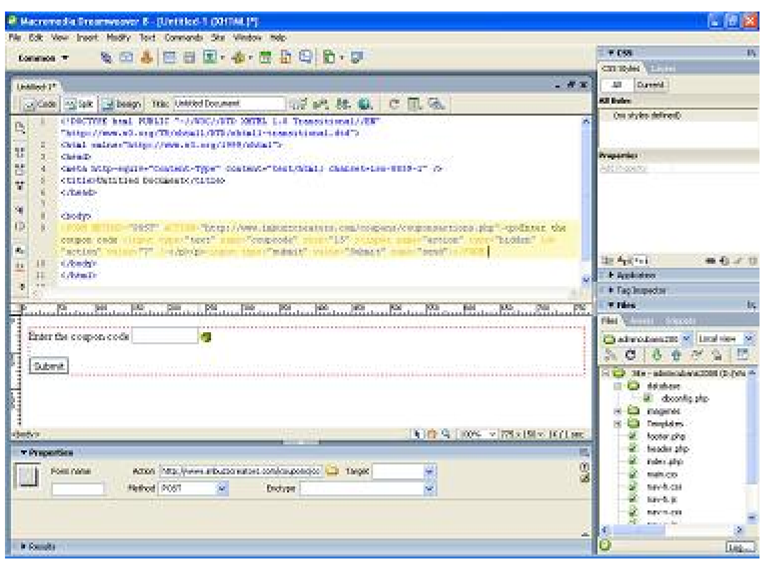
14) As you can see the coupons was created, in a similar way you can edit and delete coupons. Application will exchange data with the database using the php scripts and settings you uploaded in previous steps.



15) Now let’s check the use of a coupon. Application generate a form code that user can put in his custom web pages.



16) Just copy and paste this code inside a sample html page in Deamweaver (user can use any html editor).



17) Now user just need to put this page in his site (could be an external site not the same where you put the "coupons" folder). This work like the optin software, just a web form that allow enter a code, if code is approved it will redirected to the Redirect URL associated with this coupon if fail it will go to the coupinvalid.htm that you upload.

18) User can track the statistics of the use of his coupons pressing the Statistics button in the main application. Of course need to have some data in the database.

Xtreme Forum Manager – Instructions

Forum Poster Function: This software allows you to customize forum posts and helps you to organize them easily. You can keep a list of forums that are related to your niche as well as save your forum contributions.

1. Enter the **'Subject'** and your message in the Message Editor panel. You can customize the content to your preference and enter either plain text or in HTML or any other forum codes.

2. Click on the **'Save'** button at the top to save the message for future references and usage.

3. The Browser panel of the program allows you to surf the internet, primarily to go online to visit forums related to your niche. Enter the URL of the forum that you would like to visit. Add it to the Your Forums panel by clicking on **'Add Current URL'**. This panel keeps a list of the forums your visit. **Enter in your 'Username' and 'Password**' for the forum as well for easy access.

4. Browse the forum to find a thread that you would like to post a message in.

5. Click on **'Load'** to load a previously saved message.

6. Click on **'Preview'** to see how your message will look like before posting it.

7. Once you are satisfied with the message, just click on **'Paste Message on Selected Field'**. Once the form is complete, click the submit button on the posting page of the forum.

8. You can then repeat steps 1 to 7 for another forum.

Xtreme Info Box Creator – Instructions

Step 1: Info Box Settings

You can manipulate the border, size, font, color and background of the info boxes which are displayed below as a preview.

As you make changes to the values in the settings, you can instantly preview how the info boxes will look like.

Once done, click the next button.

Step 2: Select the target element of your info box

You have 4 choices how you want the info boxes to be displayed. You can either choose if you want it to appear when the user will hover their mouse on the

(a) Text link

(b) Image

(c) Table

(d) <div> tag.

Choose anyone of them according to your preferences. Then go to next step.

Step 3: Enter the content of your info box

This is where you enter the text of your info box. You just have to follow the structure like the preview in Step One.

Step 4: Generate

You just have to click the button "Finish" and voila!

A window will popup and will tell you where the html file has been generated on your PC. Then, you have to copy and paste the javascript code provided within your <head> tag:

<link rel="stylesheet" type="text/css" href="infostyle.css">

<script language="JavaScript" type="text/javascript" src="info.js"></script>

That's it. You are done!

Xtreme Keyword Research Tool – Instructions

NOTE: A security check appears whenever you make 7-10 searches within 30 minutes. It comes from the wordtracker site which we're extracting data from.

You should be able to download the image and fill the right characters in,but there are times when it fails.

In any case, if it fails, simply visit **http://freekeywords.wordtracker.com/** and you'll be able to fill in the captcha code there.

Keyword Tool Instructions

1. Click on the **'Main Keyword'** button and type in the keyword you would like to search for.

2. Click on **'Gather Keywords'**.

3. Wait for the 100 keywords and the no. of daily searches to appear.

This will give you an indication of the amount of demand there is for your targeted keywords.

4. Either choose to conduct searches for more similar keywords by clicking on the **'main keyword'** button again and keying in a new related keyword or clicking on the **'Add Keywords'** button to add your own keywords manually.

Note that the new keywords will appear below the original 100 keywords you've generated. If a popup appears to ask you to enter a captcha code, just follow the instructions.

5. When you've gathered enough keywords, click on the **'Gather Data'** button to generate the amount of searches on Google, Yahoo and MSN search engines. This will give you an indication of the amount of competition you have for the three main search engines.

6. Click on **'Save Results'** to save your results.

7. To conduct keyword research for a new set of keywords, click on **'Delete All'** button at
the bottom to clear the results.

Xtreme Link Analyzer – Instructions

1. Click on the **'Add Sites'** button and type in the url of the website(s) you would like to gather data for.

2. Click on **'Gather Data'**.

3. Wait for the results to appear. You can check for the Google PR, Alexa ranking, no. of backlinks from Google, Yahoo, Altavista, Ask, and Alltheweb. You can also view results for the number of pages indexed in Google and Yahoo search engines.

All these will help in monitoring your SEO efforts and also spy on your competition.

5. Click on **'Save Results'** to save your results.

6. Either choose to gather data for more websites or delete the results and start.

Xtreme Link Cloaker – Instructions

Simple Cloak: This is a simple and direct of link cloaking method.

1. Enter the affiliate link you would like to cloak.

2. Enter the page title you would like to use.

3. Click on **'Create Page'** and save the file according to how you want your link to be cloaked. For instance, if you want to cloak a link as http://www.imtoolcreators.com/hostgator.htm, save the file as 'hostgator.htm'.

Thereafter, upload to your server.

Advanced Cloak: This allows you to cloak your links stealthily and enable you to redirect your traffic to whichever URL you want and still get credited for your commissions because of the cookie placed.

Furthermore, the URL in the address bar will change accordingly to the one you've indicated, hence people may not even notice it's an affiliate link.

1. Enter the affiliate link you would like to cloak.

2. Enter the display URL or chosen destination of your choice.

3. Click on 'Create Page' and save the file according to how you want your link to be cloaked. Thereafter, upload to

your server.

Some suggestions for using advanced cloak:

1. If your merchant leads people to their squeeze page first, you can bypass it by entering the sales page directly instead.

2. If you have presold your list before and would like to bypass the sales page altogether, use the advanced cloak to cloak the order link and direct your list to order straight away.

3. If your merchant has sucky sales copy, you can create a new sales page specially for promoting that particular **affiliate program**. Thereafter, use the advanced cloak function and cloak the order link and insert it in your sales page.

There are many other ways which I'm sure you can think of. Just be creative and I'm sure you this tool will create wonders for your affiliate campaigns

Xtreme Link Directory Submitter – Instructions

Project Setup

1) Click on **Add Project** button to start a new website submission.

2) Enter your personal information according to what is being asked next to each fields.

3) Enter your website information according to what is being asked, these include your website url, title, description, keywords and also the place where you will add a reciprocal link (if asked) for each directory.

4) Name the Project with the name of your website so that you can easily track. Then click OK button.

You can also delete or edit a project. You just have to select one from the drop down menu and do the modifications.

Directories

5) To add, delete, and edit directories in the software list, just click on the buttons at the top of the software.

Submission

6) Organise your directory list first by clicking on the columns. Normally, it's better to sort the list descending order according to PR (Page Rank).

7) Start submission by click either double clicking on the directory you select and then a little browser will open below.

😎Once page loads, select the categories in the website and then click on add links.

9) Once you see the form on the webpage, just click on the button which is represented by a Blue circle with a tick inside to fill in the form automatically.

10) Check if fields are correctly filled in and the right category has been selected. Press submit button on the webpage.

11) Repeat step 7 to step 10 again until submission is done.

Xtreme Optin Generator – Instructions

Note: This software **requires you to have an autoresponder account** which you really should have if you wish to build a list and make a full time living online.

If you do not have one yet, **click here to get an aweber account.**

Optin Tool Instructions

Configuration: Generate an optin form in just 4 easy steps. Enter your autoresponder account details, text messages etc. to start configuring your form to your needs.

1. Click on 'Start Wizard' on the top left hand corner of the program window and Step 1: Choose Your Favourite Form Setup, which is either 'Use default templates for popular autoresponder services' or 'Paste html code from your custom autoresponder service'.

Popular autoresponder services include:

- EmailAces.com
- GetResponse.com
- Aweber.com
- 1ShoppingCart.com

2. After you click on 'Use default templates for popular autoresponder services', you would arrive at 'Form Setup'.

Here, you will need to input the following details:

- Autoresponder Service
- Your Account ID / Merchant ID / User ID
- List or Campaign Name / Default Autoresponder ID / List ID
- Optional Tracking Mode
- Optional Redirect URL
- Form Title Text
- Submit Button Title

3. After entering all the above details, you will arrive at Step 2: 'Domain and File Info'. Input your website's domain, and select the Output Location or choose the folder where your website's HTML files are usually stored. You can edit the Form Name, Stage Width and Height to your preference. Click on 'Next' to proceed.

4. You will arrive at the panel Step 3: 'Enter the text to be displayed in various messages and prompts'. Firstly, you can preview the 'Progress Bars' and select one out of 4 choices by clicking on 'Insert progress bar'. The html code will be input into the text field

Then enter in the text for the following fields:

- Optional Waiting Message while Contacting Server: displayed in a message area immediately
  after the 'Submit' button is pressed by the prospect.
- Missing Name Prompt: displayed in an alert message when the form's name field is blank.
- Missing or Invalid Email Prompt: displayed in an alert message when

the form's e-mail address field is left blank or it contains an invalid e-mail address.

Do not forget to upload the image file related to your **'Progress Bars'** to your web server. You will be prompted when you click on 'Insert progress bar'

5. At Step 4: 'Describe what to show after a successful post of your form', you can select and enter the details for one of the following items below, which will replace your form after it has been successfully posted to its destination.

The items are:

- To display a text message
- Overlay a webpage
- To display an image – You will need to specify the path for the program to find it and it will automatically copy the image you provided into the output folder and generate the HTML to display that image.
- Error message

Click on **'Next'** to proceed.

6. You are now ready to use your generated form. You can save it in the following formats:

- Save as webpage
- Place code in your clipboard to paste in your html editor
- Save as Wordpress plugin
- Save as Wordpress sidebar widget
- Upload your web page to your web server along with the "sub pages" that include your form's name. For example, if your form's name is "Form 1", the names of the subpages are as follows:Form1_frm.htmForm1_trn.htmForm1_err.htm*Click on **'Finish'** to use your form.*

If you selected either 'Save as web page', 'Save as Wordpress Plugin' or 'Save as Wordpress sidebar widget', go to the Output Folder to view the exported form and its related files. Upload the necessary files which include 'optinb.php', your exported .htm file and all your image files onto your web server.

7. You can save your configuration by clicking on 'Save Configuration' and load it another time so that you do not have to retype any information.

8. When you wish to reuse a saved configuration, just click on 'Load Configuration' after clicking on 'Start Wizard'.

Xtreme Poll Generator – Instructions

Installation & Configuration of Database and Settings:

Step 1: Install the application onto your computer

Step 2: Go to your **cPanel** URL and enter your login info.

Step 3: Go to **'MySQL Database'**

Step 4: Create a new database or use a previous database

Step 5: Create a user with a password

Step 6: Assign and check all permissions in your database to your user.

Step 7: Go to **phpMyAdmin** to create tables.

Step 8: Select the database you created or wish to use and go to the **'SQL'** tab.

Step 9: Copy and paste the SQL Script <polls.sql> which is found under Program Files in the folder named 'Scripts' of your installed poll generator software. This is to create database structure and then click ' Go'

Step 10: Check the tab **'Structure'** and you will find 5 tables created.

Step 11: Now open your software application and then click on **'Settings**'

Step 12: Enter in your site URL (i.e. http://www.mydomainname.com/polls) and make sure that the names of the database and user and password correspond with that in the MySQL server.

Step 13: Save the settings.

Step 14: Open your FTP client and create a new folder named **'polls'** in the root of your site.

Step 15: Then, upload your customized <pollsettings.php> file and the other php scripts found under Program Files >> Poll Generator Software >> 'Scripts', to the 'polls' folder you created earlier on.

Step 16: Upload the 4 php files to this folder and we are done with the install.

Creating Polls:

Step 1: Click on 'Add Poll' and customize the title, question, description of the poll.

Step 2: You can edit the width of the poll.

Step 3: Select the theme from the list of preset themes .

Step 4: If you want to add a header and footer, do so by entering the image source as well as the URL which the header and footer will direct to when clicked.

Step 5: Set the answers to the questions simply by adding choices.

Step 6: You can click on the bottom buttons to edit and delete polls.

Step 7: Click on 'Generate Poll Output' to generate HTML code which can be embedded in any page or website. Copy and paste this code inside any html page using a html editor. You can edit the width of the iframe there.

Step 8: Upload the HTML page onto your server and the poll will be live.

Step 9: Track and monitor polling results by selecting the desired poll and clicking on 'View Results'

Step 10: Click on 'Refresh' to refresh the polling results to get real-time updates.

Xtreme Project Manager – Instructions

Project Creation Function: You can create a new project at the start of the program or choose to load an existing one.

1. Create a new project by clicking on **'New Project'**. Enter in your project name, expected start and end dates of the project and the priority category that the project falls under. Click on 'Ok' to create the project.

2. Your project will fall under the priority category it belongs to, which is under the **'Projects'** panel found on the left hand side. Click on the project name to edit details and view tasks of the project.

3. You can add new tasks for the project by clicking on **'Add New Task**' and enter enter the task description, task details/ notes and the start and end dates of the task. Click on 'Save' to save the task.

4. You can edit the content of existing tasks by selecting the **'Edit Selected Tasks'**.

5. You can select the tasks that you want to remove from the project by clicking on **'Remove Selected Tasks'**

6. When a task is completed, the checkbox next to the task should be clicked on and this will indicate **the percentage of project completion**.

7. You can make use of the **'Calendar'** function to check dates and manage your daily schedule.

8. Click on **'Save Changes'** to update your project listings, schedule and content

Xtreme Salesletter Generator – Instructions

Step 1: General Settings

Follow the instructions as provided. Enter the page title, your full name (used as signature for the sales letter) and date.

Browse inside your PC to select the graphics for your header, footer and product image. Then also select the background color of your page.

Step 2: Page Contents

Enter the headline of the sales letter. This is the first phrase you see at the top.

Enter the subheadline which is normally of a smaller font.

Introduction paragraph is where you start your letter. It starts like:

From: John Doe

Date: ….

Dear Friend,

Add a few paragraphs of content.

Step 3: Additional Page Contents

Introduce your product here. Tell a little more about it and how it can benefit them.

Step 4: Features

What are your product features? Add the main benefit in the title and then develop in the body. Change the font if need to make it impactful.

Step 5: Testimonials

This is where you enter testimonials and reviews of customers. You can change the font, the background and also the color.

Step 6: Ending Page Contents

The "closing statement" is just above the order button. This is where you ask the user to take action and order.

The "P.S" is a reminder after the signature. This is where you sum up the main benefit and also act them to take action now. It is the last part of the sales letter.

Step 7: Order Links Options

- Direct Link to Product Order Page: use this is you have a web form to filled in for the users to order. It should be a direct link to another page on your website.

- Clickbank: If you are using clickbank, just enter your clickbank ID, the product name refers to the NUMBER of the product in your clickbank account. It should be between 1 – 500. Just check your clickbank account to know. But by default it is 1. Then enter some description of the product in a few words.

- Paypal: This is where you enter the codes for your paypal button and link.

- Affiliate ID: Use this to promote Salesletter Pro on your sales letter. Just enter your paypal email address and you should be credited for each sales you make.

Step 8: Finish

Select the folder in which you want the sales letter to be created and click on Save Generated Code button. It's done!

Xtreme Squeeze Page Generator – Instructions

Note: This software **requires you to have an autoresponder account** which you really should have if you wish to build a list and make a full time living online.

If you do not have one yet, **click here to get an aweber account.**

Squeeze Page Instructions

1. Click on "Start Wizard" button to start Step 1.
2. Select a template from the drop down menu. You can have a preview of the each templates inside the software at the right hand side.
3. Once template selected, click on "Next" button for Step 2.
4. You have to fill the following information to build up your squeeze page:**Title:**
   This will be the title of the page.
   In html tags it will be between the <title> </title>.

   Metatags: The metatags, you can enter something like:

<meta name=”KEYWORDS” content=”enter your keywords here”>

If you’re unsure of what this is, leave it blank.

Headline: This is the first text which will appear at the top of the squeeze page. Normally, it should have a font size bigger than 24 pixels. You can also choose the bold option and colors.

Introduction: This part comes just below the Headline and should have a smaller font and bold too.

Note: You can use HTML tags for the headline and introduction. So you can insert images or videos if you like.

5. Once filled, press the “Next” button for Step 3.
6. The bullets parts are for short benefits that you can highlight in the squeeze page to encourage visitors tooptin. There is a maximum of 6 benefits that you can add inside. Keep it short and sweet.
7. Press the “Next” button for Step 4.
8. Insert your autoresponder optin code. Javascript can be inserted as well.
9. Click the “Next” button for Step 5.
10. You now have the option to create the squeeze page in any extension you want in the output folder inside the installed software OR you can simply select option 2 which puts the codes in a clipboard and you can paste it inyour html file directly

Screen Capture Tool Instructions:

Screen Capture Software Instructions:

Step 1: Open the application.

Step 2: To add a webpage to your list, click on 'Add URL'. Enter in the URL of the webpage that you would like to make a screen shot of. Please remember to add in "http://"

Step 3: If you wish to take screenshots of multiple sites, create a .txt file using Notepad. Inside the file, type in the URLs of the webpages that you wish to take a screen shot of.

The text should be input in either one of the following 3 manners:

1. One URL per line

2. ID and URL separated by a pipe "|" (i.e. Google |http://www.google.com)

3. ID and URL separated by a comma "," (i.e. Google,http://www.google.com)

Then in the software, click on the 'Import' button to import the file.

Step 4: Alternatively, also under the button 'Import', you can type in the list of URLs inside the box below under 'Type URL list'.

Step 5: Configure your browser width and height. This should be the same as the dimensions of your desktop screen. Width and height dimensions are in .px (pixels).

Step 6: Customize the size of your screenshot/thumbnail. If you wish to 'Keep Aspect Ratio', check the box beside it.

Step 7: Select the file format for the image to be exported in. You can choose from .jpg, .gif and .bmp.

Step 8: To begin creating the screen shots, click on the 'Start' button.

Step 9: To stop the process at any time, click on the 'Stop' button.

Extreme Keyword Analyzer Instructions

Step 1: Open the application.

Step 2: To add keyword, click on 'Add Items'. Enter in the keyword that you are analyzing.

Step 3: If you wish to analyze multiple keywords, create a .txt file using Notepad. Inside the file, type in the list of keywords that you wish to analyze.

The text should be input one keyword per line.

Then in the software, click on the 'Import Items' button to import the file.

Step 4: Select the keyword from the list you wish to analyze by clicking on it. Otherwise, click on 'Select All' button. And click on 'Analyze' button to begin analyzing.

Step 5: Configure the delay interval and 100 Searches per delay interval according to what you require.

Step 6: Click on 'Stop' button when you wish to stop analyzing.

Step 7: Click on 'Export' when you wish to export your keyword analysis details onto a .csv file which can be opened with Microsoft Excel program.

Step 8: To start afresh with a new list, just click on 'Delete Selected' or 'Delete All'
