

# *Local Hookupz Picture Stealer*

*Created by:*

Sup Folks,

I know some of you don't know me, and I sure as hell won't know you, but if you have downloaded my software then you've shared a common curiosity with many other people. I for one am a highly elite but modest programmer attending college on the West Coast in sunny California.

I've written a lot of cool stuff throughout the years, from professional game cheats, to cd-protection breakers, key gens, and perhaps all of the nitty gritty that normal people couldn't do. I'm sorry if I brag a lot but I feel my years of studying has paid off and I have a high paying enough job to not need to sell most programs I've made to support myself throughout my childhood years ☺.

So I am releasing one of many fantastic programs of mine, this program is called the 'Local Hookupz Pic Stealer' It allows you to steal the pictures of HOT CHICKS☺ all to one directory instantly and if you're a girl, you can steal pics of hot studs as well for your future viewing pleasure. A lot of sites have blocked normal right clicks, and in most cases (depending on your browser) you are not able to get the picture without a screen copy and paste.

This can be annoying, so I wrote this program for a few buddies of mine who spent a lot of time online checking chicks out, and I am releasing this program for others as well. The cool thing about this program is that once you've saved all of the pictures for a person, you don't have to stay on their page and wait, it's all multi-threaded (meaning their images are downloaded in a new thread which keeps the main application window very responsive. I've written software for MySpace and many other famous sites, that can scan through and download everyone's pictures automatically☺.

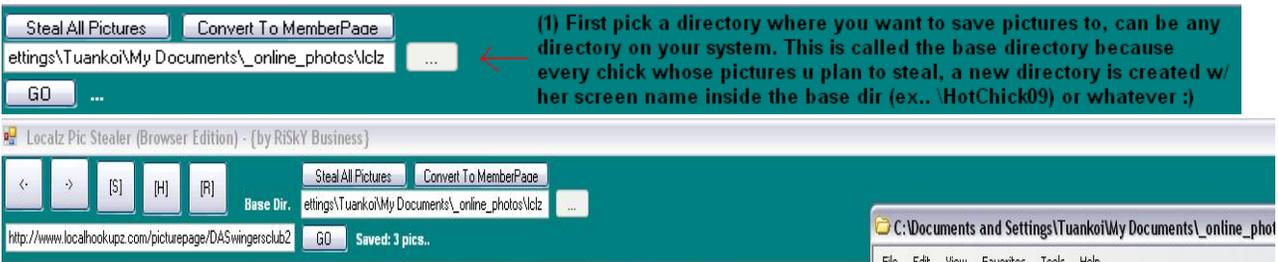

If you are interested, feel free to contact me, my info is below☺.

### **Product Features:**

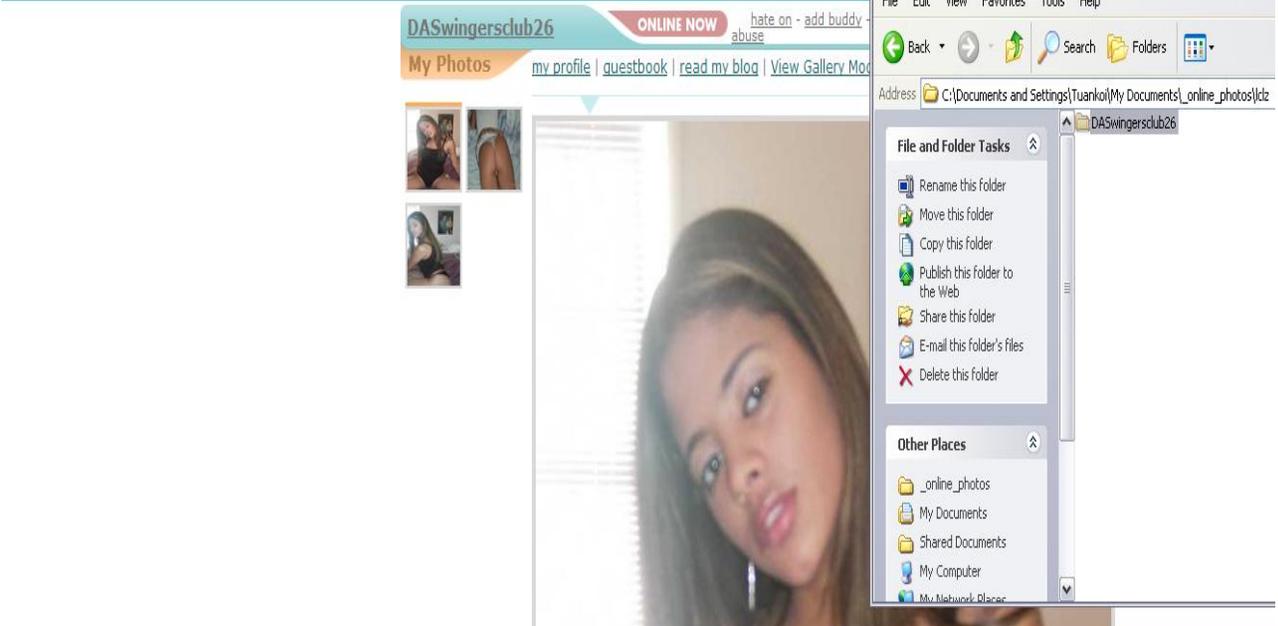

- Multi-Threaded
- Member Scan Mode
- Convert to Member –Mode easily
- Easily creates a new directory in the base dir based on the members screen name.

### **How to use:**

(1)

(2)

Last but not least, after setting the directory, just browse over to any chicks profile, click on **'Steal All Pictures'** and there you go☺. Photos will be downloaded to the specified directory and you will be safe to navigate away.

### **Known Bugs:**

(A) Sometimes the application crashes if the html document parser encounters some weird characters within code. I am actually quite lazy to fix the bug, but if enough people show interest, I will create a new version w/ updater and make all my other tools an all-in one pic stealer 😊.

Enjoy,
