

Use the PDF file format to publish and distribute your special reports, eBooks, articles, etc.

And don't forget to make them viral.

ViralPDF™ is a small, downloadable software program, designed to add the single most important viral component to your PDF files: Branding functionality.

ViralPDF™ lets you

- **Use unlimited, brandable links** in your documents, so you can promote as many programs/products/services as you like!
- **Brand even eMail-Addresses!**
- **Set an expiration date on your PDF files!** After that date is reached, the brander will refuse to brand your documents and ask the reader to visit your website for a newer version of your eBook.
- **Put your PDF eBooks on your website!** Search Engines like Google will index these - and as we all know, Search Engines love content!
- **Catch links not branded by your readers!** If you promote more than a single program in a PDF file, chances are, your affiliates will not brand all of the links inside. viralPDF™ lets you brand those links with *your* ID!
- **Brand regular text!** ViralPDF™ not only lets you brand links, but also regular text, like the sponsor's name or website!

For more in-depth information about **viralPDF** and how this awesome software will help your eBooks spread at the speed of light (well, almost;) visit us now at <http://www.viralpdf.com>
